ABOUT ME

I am a passionate third-year Computer Science student with experience in frontend and backend development, combining technical skills with creativity to build efficient and scalable solutions. My analytical focus and attention to detail allow me to develop functional and attractive applications. I seek to continue growing in the tech world, contributing ideas that make a difference.

SKILLS

Python, Django, FastAPI
JavaScript, TypeScript, React, React Native, NextJs, NodeJs, Express, FeatherJS
Docker, Compose, VPS, CI/CD Pipeline
Java
Strapi
Tailwind, Native Wind
SQL, SQLite, PostgreSQL, MySQL
English - C1

EXPERIENCE

BRONCO'S MARKET <https://brancosmarket.vercel.app>
I developed an e-commerce platform for Bronco's Market from scratch, implementing a modern frontend with React and Tailwind CSS, and a robust backend with Strapi. I designed an intuitive and responsive interface, optimized for a smooth user experience. On the backend, I configured Strapi to manage content, authentication, and the REST API, ensuring scalability and security. This project demonstrated my ability to create efficient full-stack solutions, combining attractive design with solid business logic.

MCLORENZ
I developed a desktop application for the Mc Lorenz restaurant using Python (PyQt) and PostgreSQL, integrating order management, automated inventory, and financial reports. The solution optimized key processes, reducing order-taking time by 30% and eliminating manual stock errors, thanks to a robust relational database and an intuitive interface. (Included: data persistence, PostgreSQL triggers).

ANGEL'S PETS
I developed a webapp for Angel Pets with React and Tailwind on the frontend, and Strapi with SQLite on the backend, creating a comprehensive sales and inventory management system. The solution included real-time stock control, a sales module with transaction history, and a customized administrative panel, achieving a 40% optimization of operational processes and reducing manual errors through an efficient architecture and an intuitive interface.

UNIVERSITY RESEARCH CENTER: 2024-PRESENT
As part of the backend team at the University Research Center, I develop and maintain robust solutions for academic and scientific projects. I manage databases and optimize processes to ensure high performance in data analysis systems, collaborative platforms, and research tools.

EDUCATION

2023 - PRESENT | BACHELOR'S DEGREE IN COMPUTER SCIENCE
Central University "Martha Abreu" of Las Villas
